

N-LINEt

The N-LINEt is the perfect addition to aphotherapy cabin. This mobile therapy device is designed for the effective treatment of hands or feet.

Features:

- Real-time dosimetry
- Mobile and versatile and easy to use
- Reduced light spill protects from unwanted UV exposure
- Electronic starters increase longevity of the UV-tubes

targeted therapy

Individual treatment of hands and feet and by clever rotation of the lower modules, is able to treat lower legs. As a result therapy sessions are short and comfortable for patients.

Advanced Engineering

Exceptional safety by reducing light spill. Independent sensors help guaranteeing reliable treatment results.

Maximum Efficiency

Optimised lamp arrangement with separated light banks for an efficient and highly uniform light output.

N-LINEt

four separate groups of lamps

sensor observation of each lamp group

individual and different dosage entry of each module by radiation at the same time

modern microcontroller drive in industry quality

to the split second calculation of the therapy time

automatic turn off after end of treatment

a vertical adjustment of feet panel is possible

automatic detection of module direction

a total of 36 low-pressure lamps

no loss of radiation on the ends of fluorescent lamps through double row arrangement

especial homogeneous radiation

fast and easy cleaning through holohedral acrylic glass disks

mobile and flexible

designed with ergonomics and safety in mind

gentle for spine and comfortable for the patient

real time dosage of each lamp group

preset dosage limits

Protection of reradiation

no irruption of liquids in the inside of the device

SPECIFICATIONS

Power supply: 230 V, 50 Hz

Power consumption: 600 VA

Dimensions(WxDxH): 97 x 75 x 134 cm

Weight: 50 Kg
